

*"THE PLACE OF BIRDS IN
NATURE is entirely unique. Each
species performs a service which no
other can so well accomplish; each is
structurally modified for the
particular work nature demands
of it." — THE AUTHORS*

***RUBY-THROATED
HUMMINGBIRD** (male, front;
female): "This most diminutive of our
birds is always associated with the
flower garden. It is a flash of color
as it moves on vibrating wings
from flower to flower."*
